

Project Planner

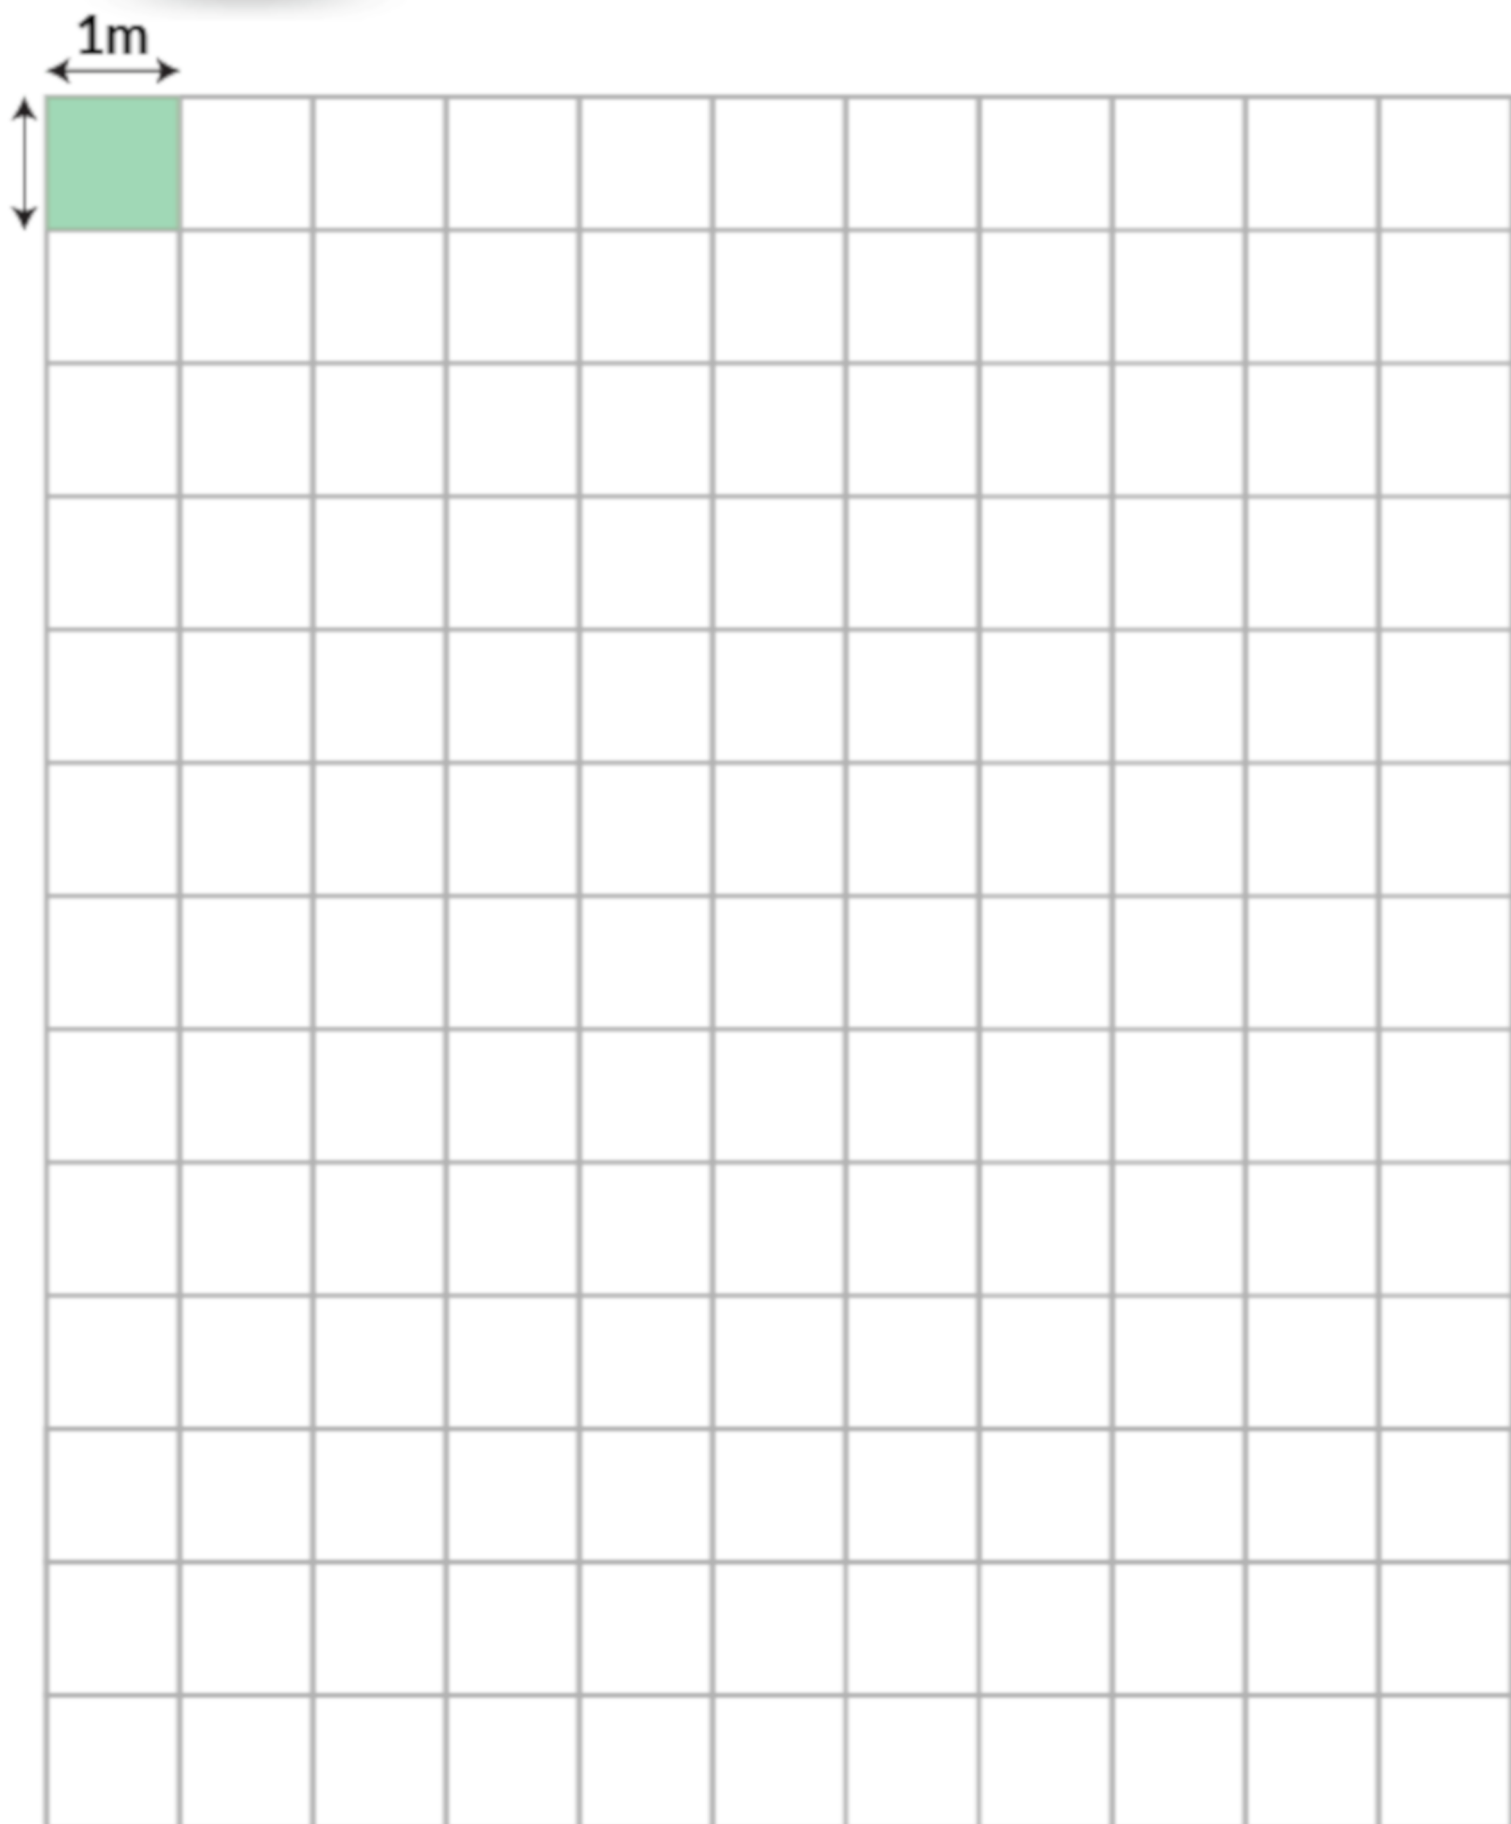

Using the Artificial Lawn Company Project Planner

1. Measure the dimensions of the lawn areas you wish to cover (in metres) and plot this onto the plain grid provided
2. Our artificial grass rolls are supplied in 2m and 4m, up to 25m on a roll. Work out the most efficient way to cover your garden ensuring all rolls are laid in the same direction
3. Measure the joint length between rolls to determine how much jointing tape you need, for every 3m of tape, you will need 1 x jointing adhesive for a secure join
